

Green Paper on Ageing

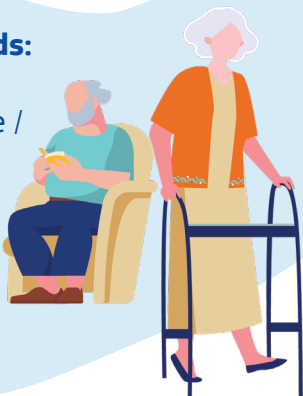

27 January 2021
#EUAgeing

In the last 50 years, life expectancy at birth has increased by about 10 years for both men and women. This is a remarkable achievement that poses challenges and offers opportunities. The Green Paper on Ageing opens a wide debate on the impact of this trend – for citizens, whatever their age, and for society as a whole. It raises questions that span across the life-cycle – from the formative years, to working age, to retirement, and stages of growing needs.

Ageing: challenges & opportunities throughout the life-cycle

Growing needs:

healthcare,
long-term care /
mobility,
connectivity,
well-being

Formative years:

life-long learning,
healthy & active
ageing

Working age:

labour markets,
productivity,
innovation
and business
opportunities

Retirement:

volunteering,
intergenerational
relations /
adequate, fair
and sustainable
pension systems,
old-age poverty

Lifelong learning and healthy and active ageing need to start at a young age and continue throughout adulthood. Acquiring new skills boosts job opportunities during working years, but also helps people stay active into later life.

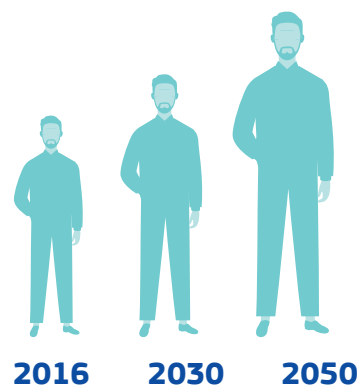

Many **older people continue to make an active and valuable contribution** to society and the economy.

One-fifth of 65-74 year olds participate in formal volunteering while people aged 75+ also remain engaged when their health allows.

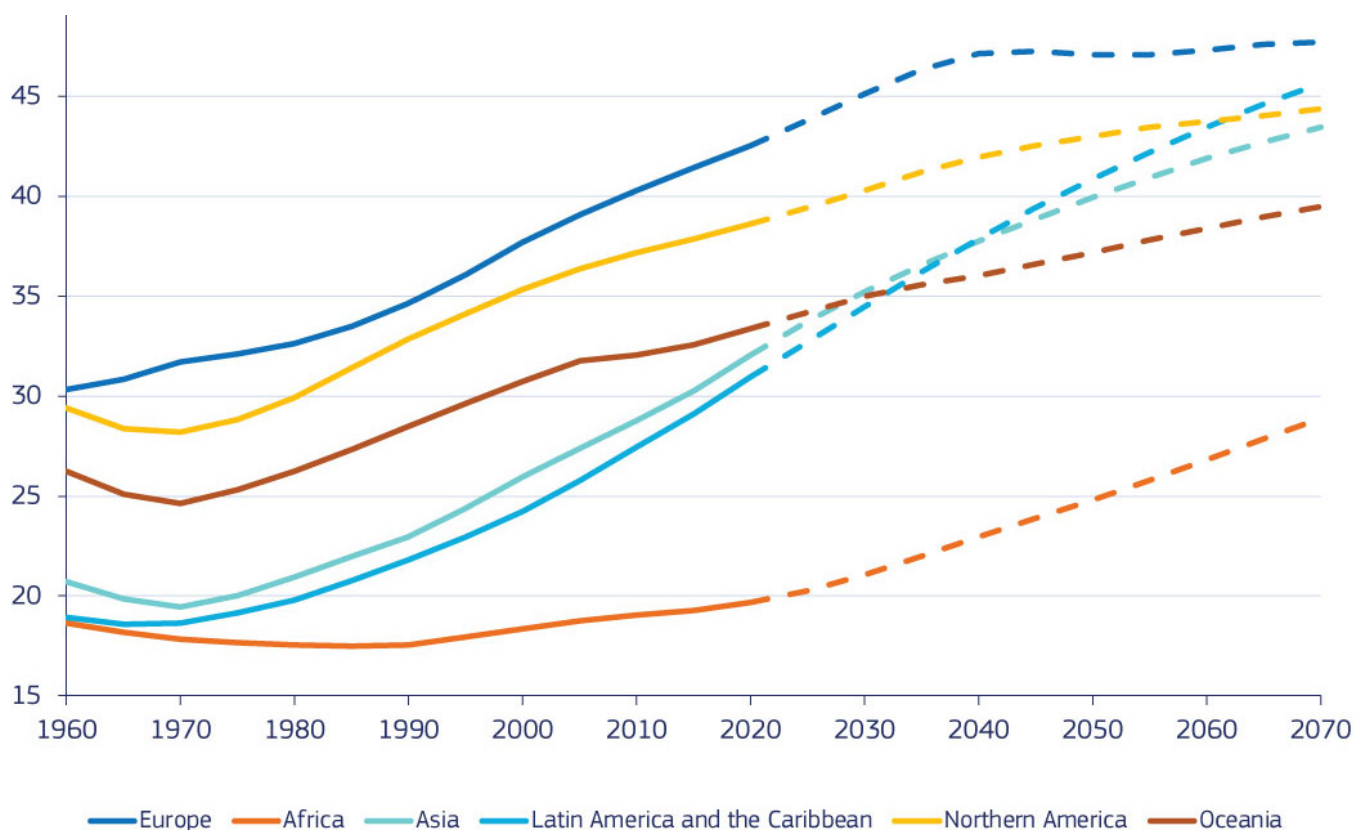

With people living longer lives nowadays, the demand for **healthcare** and **long-term care** in the EU is increasing. Ensuring access, affordability, and quality as well as adequate workforce will be a common challenge.

The number of people who receive publicly-funded **long-term care** is expected to increase from **19.5m** in 2016 to **23.6m** in 2030 and **30.5m** in 2050 in the EU.

Median age of the world population by continent, 1960-2070

Source:

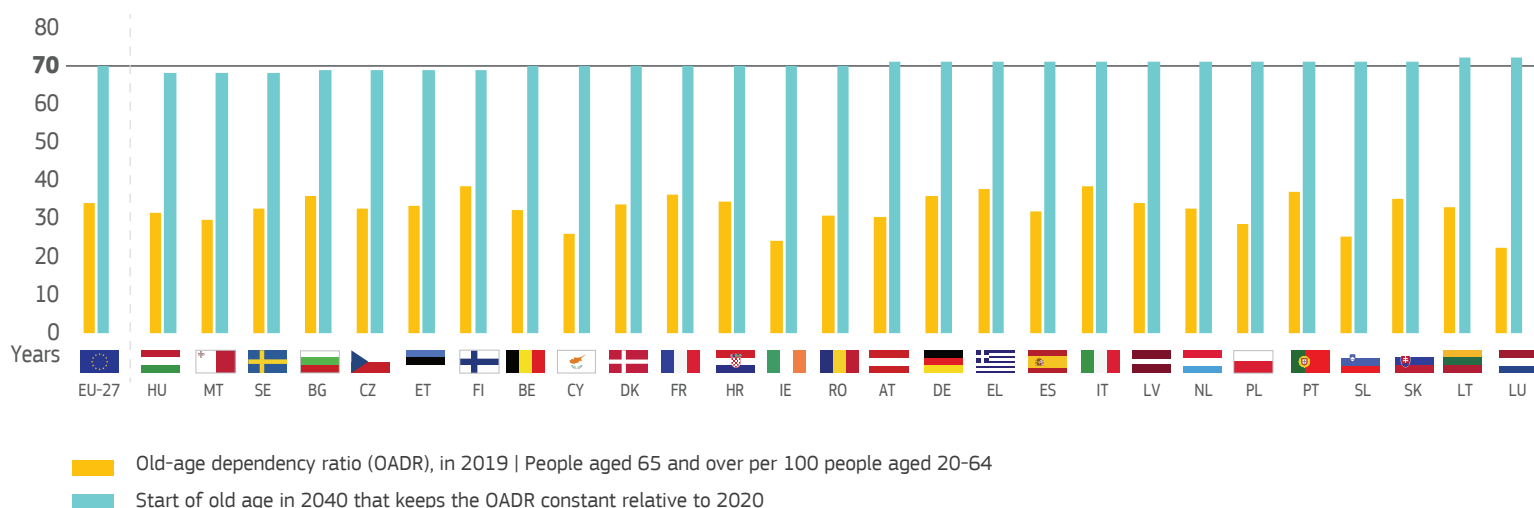

United Nations, Department of Economic and Social Affairs, Population Division (2019).

The EU's **old-age dependency ratio** is projected to be **59%** in 2070, almost a **75%** increase (from 34.1% now). So, there will be fewer than two persons of working age for each person aged 65 and over.

This requires immediate action, if we want to ensure intergenerational fairness, and good living standards for all our citizens, young and old.

Old-age dependency ratio in 2020 and the start of old age in 2040 that keeps the projected old-age dependency ratio constant per Member State.
